

HAZARDOUS AREA COMPLIANCE

Hazardous Area Compliance Training course is intended for electrical workers or managers to build a Hazardous Area Verification Dossier and provides an overview of duties and responsibilities in regard to Hazardous Area legislation and compliance.

Course Content

- Legislative and Standards requirements and duties i.e. Duty of care responsibilities of all parties involved in the safety of Hazardous Areas under occupation health and safety act and regulations relating to Hazardous Areas
- Safe systems of work for hazardous areas
- Competency requirements for hazardous area classification, design, installation, inspections, testing and maintenance
- Properties of flammable and combustible materials
- Explosion – protection principles
- Key compliance features of each technique i.e. what can impact at site on the integrity of an Ex certified equipment
- Explosion-protected equipment certification
- Requirements for a Verification Dossier and what to look for when visiting a classified Hazardous Area and reviewing the dossier

Examples of relevant industries include aviation, food processing, fuel storage and dispensing, industrial process, instrumentation and control, marine, material handling and storage, mining, and petrochemical facilities.
